## 1 General

SR1 card reader is a card reader integrating magnetic track, contact and non-contact radio frequency. It adopts advanced radio frequency receiving circuit design, has the function of inserting brush, has the characteristics of high receiving sensitivity and high performance, and is suitable for various payment fields.

## 2 Product Specifications

Dimension: 66.7 \* 64.7 \* 15 mm

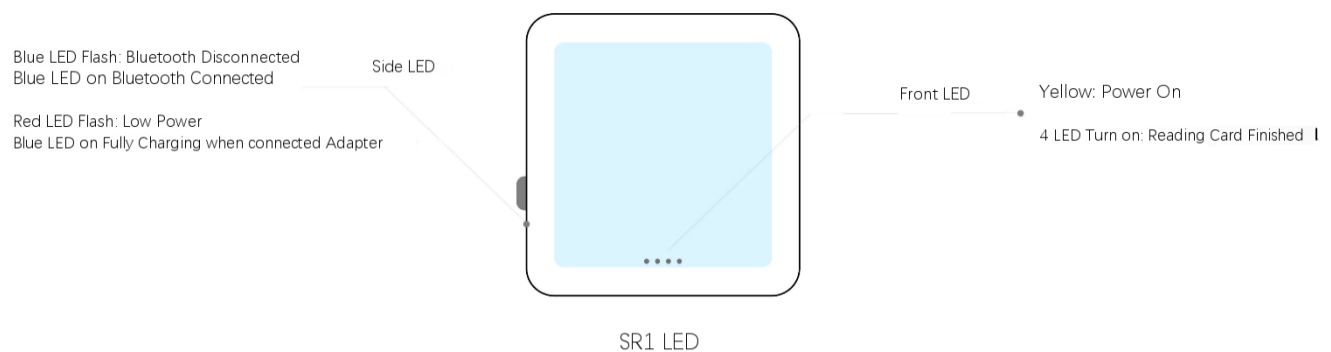

## 3 Product Operation Instructions

### 3.1 Switching on and off

Press and hold the power button for 3-5 seconds, and the 4 LED indicator lights on the panel will flash at the same time and make a long beep sound, then the startup is completed. The blue light of the side indicator light flashes, indicating that the Bluetooth module has been turned on and can be searched normally.

Long press the power button for 3-5 seconds, the side indicator turns green, the four led indicators on the panel flash at the same time, and then the shutdown is completed.

### 3.2 Led indicator

### 3.3 Description of android DEMO

Open the demo application, click the CHECK OUT button in the StartTrasaction interface, and the Bluetooth search will be started for the first time. At this time, SR1 is in the power-on state, and it can be searched as shown below:

Click Connect to complete the Bluetooth connection to the device. Click the envelope on the transaction interface to switch the card reading mode.

For other business functions, please refer to the demo application source code and the API User Manual MagicPos SR1 host SDK Service \_ V0.2.docx.
